

Name : Amorangi

Persuasive topic : Why you shouldn't litter

Persuasive techniques you should include in your speech :

Asking your listeners a question	Using exaggeration	Involving facts or numbers to support your ideas	Sentences with groups of 3 adjectives	Words that involve emotions or feelings	Repeating phrases using pronouns
Would you like it if.....?	If this happens, I'll go wild!	75% of children think that.....	Television is fab, fun and informative.	Poor helpless animals suffer when they are abandoned.....	We have listened. We have learned. We have tried to make things better.

Paragraph 1 - Who are you and why are you making this speech?

Haven't you seen these poor humans and animals dying?

Talofa Lava & Malo e lelei, Hi my name is Amorangi & My topic is Why you shouldn't litter. Did you know? Litter is defined as waste products that have not been discarded properly. Litter endangers our environment, our wildlife, and our economy. It pollutes our neighbourhoods, decreases property values, and destroys our city's natural beauty. Can you see what litter does to our whole community?

Paragraph 2 - Do you think we should help people stop littering

My Opinion is Yes because littering is bad for everyone's environment, even animals' health underwater. If you stop littering it will change everything but everyone has a bad habit for littering some people mostly do it mainly. Stop littering and our earth will get better and our environment will be safe. For example someone drops a plastic bag in the ocean and an animal swimming and spots it and goes to go eat it. And if they swallow it, the plastic is bad for any animal's health because Eating plastic may lead to loss of nutrition, internal injury, intestinal blockage, starvation, and even death. We know that ingested plastic is harmful to animals, and research is still being conducted to figure out all the effects, especially to communities and wild populations. My Opinion since you guys figured out all of this information we all know that littering is bad for people & animals for their health. Not only is litter ugly to see on the ground or in waterways, but this type of pollution hurts people and the planet in multiple ways. Litter costs money to clean up, it can hurt humans and wildlife, and it also harms the environment as the chemicals in plastic break down and enter the soil or the water.

Paragraph 3 - Why you should not litter in the OCEAN !

Opinion - My opinion is NO you should not litter in the ocean because you can kill animals because the stuff that you throw in the ocean kills them. Animals don't deserve to die because of humans throwing rubbish in the water. Reason - The reason why you shouldn't litter in the ocean. Animals often mistake plastic debris for food, leading to dire consequences. Marine creatures like sea turtles,

whales, and seabirds like the toroa (Royal Southern Albatross) may ingest plastic bags, bottle caps, and other plastic fragments. Example - Sharp or rough plastic marine debris can create cuts in the digestive system, leading to infection and internal bleeding. It can also block their digestive system, making them feel full, reducing their urge to eat, and making it difficult for the animal to get the nutrients they need. In my opinion littering can kill. Both people and animals can cut themselves from certain types of litter. Illegally dumped garbage can kill or stunt plant growth. Many small animals crawl into bottles or jars and get stuck and starve to death.

Paragraph 4 – How can littering hurt Humans & Animals

In addition to water and land pollution, litter can also pollute the air. Researchers estimate that more than 40% of the world's litter is burned in the open air, which can release toxic emissions. These emissions can cause respiratory issues, other health problems and even be a starting base for acid rain. Both animals and people can injure themselves because of litter. Some litter also contains hazardous substances that should not leak out into the environment. There could already be 150 million tonnes of plastic litter in the world's oceans. Animals living in the area then eat those crops or worms that live in the soil and may become sick. It also causes health issues in humans who consume either the crops or the animals feeding on infected. People get in car accidents trying to avoid litter on roadways. Both people and animals can cut themselves from certain types of litter. Illegally dumped garbage can kill or stunt plant growth. Many small animals crawl into bottles or jars and get stuck and starve to death. Both animals and people can injure themselves because of litter. Some litter also contains hazardous substances that should not leak out into the environment. There could already be 150 million tonnes of plastic litter in the world's oceans. That's the same weight as 25 million large elephants. Etiquette is the code of polite behaviour in society while littering is someone with a lack of respect for other people, throwing out trash. Litter is blight on the area and a threat to the environment and demonstrates no sense of pride.

What is the final point that you want your listeners to hear from you? Why you shouldn't litter anywhere

My opinion is Don't litter anywhere you are going because if you leave it there & someone walks past the rubbish & they will probably pick it up for you & if you keep on littering when you are walking in a public place other people might pick it up for you & that needs to stop. There are rubbish bins everywhere in public, probably some specific places but there are rubbish bins everywhere. The reason why you shouldn't litter every place you go is because Illegally dumped garbage can kill or stunt plant growth. Many small animals crawl into bottles or jars and get stuck and starve to death. Birds, small animals and water creatures eat or get tangled in plastic bags or plastic 6-ring holders.

- For example :
- Littering is illegal
- It's Costly
- It affects farming
- The majority of marine litter ends up on seabeds
- Litter kills marine lifes
- Litter endangers wildlife
- Litter is a fire hazard
- It encourages animals attacks

My Last Opinion is When you are finished with your food & you see a rubbish bin put your rubbish in the bin for our community and our environment will be safe for us and animals. But if you actually see rubbish on the ground please pick it up and put it in the bin. Please help our land and community and to save our animals lives.

Paste a tick next to the criteria once you have completed it :

- I have asked my listeners a question
- I have used exaggeration
- I have involved facts and or numbers to support my ideas
- I have used sentences with groups of 3 adjectives
- I have used words that involve emotions or feelings
- I have repeated phrases using pronouns
